Press release

Green Datacenter to become part of SwissIX, the largest Swiss internet exchange point

The Lupfig site will undergo further development as an internet hub and it is now one of the five core sites of the largest Swiss internet exchange point SwissIX. Cloud providers, carriers, content providers and companies will thus be able to exchange their data directly via Green Datacenter in Lupfig in the future.

Lupfig, March 14, 2019 – Green Datacenter AG is developing its largest Swiss data center location. With immediate effect, Lupfig is a core site of SwissIX, the biggest internet exchange point (IXP) in Switzerland.

Cloud providers, carriers, content providers and companies exchange their data directly within the SwissIX network, without circuitous routes via international transit providers. Peering ensures a high rate of data throughput with minimum delay. Members of SwissIX can network with others directly and cheaply through SwissIX's strategic partners, thanks to its unparalleled Switzerland-wide coverage across seven peering points. "SwissIX speeds up data exchange and is an interesting option for clients with a large data volume within Switzerland," explained Frank Boller, CEO of Green Datacenter.

SwissIX is a non-profit organization which has operated a neutral infrastructure between internet providers and data center providers since 2001 and is a member of the largest European network (Euro-IX). It transfers approximately 120 Gbit/s of data on average. "Lupfig is one of Switzerland's most important data center locations and thus handles a substantial volume of data. By means of peering, implemented by SwissIX, we connect the market participants via the fastest, most direct path," said Christian Wittenhorst, President of SwissIX, explaining the reasoning behind the cooperation.

The hub in Lupfig will be set up with a transfer rate of 100 Gbit/s and can be enhanced in line with demand. As part of the launch, Green Datacenter will give special terms to the first new clients. "Our aim is to offer this benefit to interested companies as quickly as possible. This is because data centers are a part of an ecosystem that only works with excellent links," added Frank Boller.

About Green Datacenter AG

Green Datacenter AG is one of the leading providers of data center services in Switzerland. In Zurich and vicinity, the company operates four data centers. With Zurich West 3, it is now building the first high-performance data center in Switzerland that meets the requirements of the hyperscale companies. As a full-service provider, Green Datacenter offers IT infrastructure networking, deployment services, hands and eyes support, office spaces and emergency workstations, in addition to the data center spaces and colocation services. Companies in Switzerland, Europe and throughout the world put their trust in the security and availability of the Green data centers. Green belongs to InfraVia Capital Partners.
